PLANTS FROM THE DAWSON AND THE
DARLING DOWNS.

Six.—My friends Mr. E. Rose, of Hydrant, near Nanana, and Mr. James Mills, of the Darling Downs, have lately forwarded to me some interesting specimens which they had collected in their respective rambles. As many of the plants which these gentlemen noticed are but little known in this part of Australia, it may not be unprofitable to make some remarks on the collection transmitted to me. Amongst the Proteaceous shrubs which Mr. Rose saw on the Dawson, are *Hakea* and *Drevillea striata*, the former being remarkable for its size, and the latter, sometimes measuring two feet in length, and for its leaves being serrated and winged seed. The species of *Hakea* common to the neighbourhood of Sydney, are *H. pungentiflora*, *H. gibbosa*, *H. acicularis*, *H. saligna*, and *H. dactyloides*, which, although differing in foliage and habit, are all very similar in the shape of the leaves, which after a time split in half and display two black seeds with a long broad wing at one end of the seed. The *Drevillea* of the Dawson has long rush-like leaves, and a small, globose, red flower, very like that of the *Drevillea* of the Richmond River, the silky oak (*Grevillea robusta*) being found on the Castlereagh. The species of the genus *Allocasuarina* which Mr. Rose saw (viz. *A. gunnisoni*, *A. sericea*, and *A. linearis*) with purple and white flowers, not very ornamental, but on the Richmond River, the silky oak (*Grevillea robusta*) being found on the Castlereagh. The height of 70 and affording a suitable wood for the staves of whist the bright orange colour of its flowers gives it a very showy appearance. The other species of our *Drevillea* have been cultivated in the gardens of the Sydney and Melbourne more delicate species, such as *G. Bauera* and other seem rather impatient under the care of the gardeners, and do not display the same beauty which is attained by the native scrubs. *Xylomelum pyrifolium*, "the native apple," is common on the Darling Downs, and so also does *Conospermum ellipticum*, a herbaceous plant with delicate white flowers. Other Proteaceous plants, not very common in the neighbourhood of Sydney, are *Scaevola* and *Thomas Mitchell's Tropical Australia*; but it has been justly remarked that "from the parallel of the main the order diminishes in both directions, but the diminution towards the north appears to be more rapid on the Eastern than on the Western side of the continent." The plants forwarded to me, with the exception of *Canavalia obtusifolia* and *Vigna vexillata*, and some species of *Acacia*, do not occur near Sydney. The *Canavalia* which Mr. Rose saw, has purple flowers and large pods, and must be familiar to the Sydney botanist, its habit of amusing themselves on the rocks at Manly Beach. The *Vigna* is another twiner of a similar character, and nearly allied to the kidney bean. It is said to have been introduced to the Sydney gardens, and to have been in many places between the Blue Mountains and the northern parts of Australia, being identical with the species found in the interior of Asia, Africa, and America. Mr. Rose mentions that the leaves of the tree *Myrsine* (*Rhythyma verticillata*) with leaves resembling bay, but wing extended. Sir T. Mitchell found this tree at the base of Mount P. King, and particularly remarkable, as its trunk contains two peas of a bright scarlet colour about the size of a kidney bean. The native use was the trunk of this tree for various purposes, but it seldom attains more than a foot in diameter. The "*Red mangrove coral tree*" is another species of the same genus, and is also very common. Another leguminous tree which attracted Mr. Rose's attention was *Bauhinia Carronii*. The leaves of this species are remarkable, the leaflets being either two-lobed or three-lobed, and united into an entire or two-lobed leaf. The leaves of this species are described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the same genus, which is described in the "*Flora Australiensis*," and since the publication of that work, a fourth species with very small leaves has been found near Sydney. The leaves of this species are also described in the "*Flora Australiensis*," and in some respects, resembles the species near Sydney in the blue pea-shaped flowers and somewhat ovoid pods; but from the report of my friend, it is not identical with the species of the

specious, but the seed vessel is inflated membranaceous above, from which the plant is sometimes called "balloon vine." As the seed vessel comes from the vine they have the appearance of small siliques. The species is not peculiar to Australia, but is found in the East and also West Indies. Mr. Ross reports it from the interior of a jaw-stem and the base of the leaves of *Cymbidium canaliculatum*, which, according to Dr. F. Mueller, is "the botanical name of the interior of tropical Australia," which affords much evidence of climbing plants. *Stephania herandifolia*, *Lyonia straminea*, and two species of *Marsdenia*, seem to be widely diffused, and it is said that the blacks eat the unripe fruit of the latter very rapidly. One of the most interesting plants from the Darling Downs is *Conium maculatum*, or the native flypoison. The name designates the narrowness of the lip in the corolla, by which peculiarity it is distinguished from some allied genera; and the genus is named in honour of the physician, to whom it is ascribed. The flowers of this plant are forwarded to the "Frugimenta Phytographia Australis." These flowers may be formed from Dr. Mueller's elegant lithogram of *C. bignoniflora* (Pl. 55), and also those of *C. latrolii* and *C. Woolianae*, which are also forwarded to the same work. Sir T. Mitchell collected one species of *Remphoria* and four of *Stenochilus* (See "Tropical Australia") and Mrs. K. Forde has recently noticed some of the same forms in the Darling Downs. One of the plants is *Myoporum* (Cunningham), a shrub which, in some respects, resembles *Pittosporum phylliroides*, but differs altogether in the formation of the seed vessel. *Dodonaea* is a distinct and tree-like fruit, which is plentiful in this colony, but probably a more attentive examination might lead to the conclusion that it is the allied species *D. pedunculata*, which is a more collected form. One of the most interesting of the genus is *D. multiangula*, an elegant climber, which Miss Atkinson found in the Valley of the Grasse. The common species near Sydney are *D. triquetra* and *D. viscosa* (var. *viscosa*), which are distinguished by the latter having a "pretty appearance, and is sometimes called the 'post-plant.'" There is certainly considerable difficulty in fixing the species of this genus, and it seems highly probable that many of the so-called species are new. The following is a list of the species of the writer of this letter discovered in a pinnate variety of *Dodonaea* near Hunter's Hill, which he was inclined to regard as a new of the pinnate series of the genus, and as he has never been able to find a similar tree since, he has been obliged to refer to it under the name of the difficulty by referring it to *D. viscosa*. The pretty little (*elythris* (a beath-like shrub, with a long hair at the end of each lobe of the calyx) from the Darling Downs, is a tree like the forms *C. glabra* and *C. pubescens*, which are also forwarded to the "Frugimenta Phytographia Australis." It is a shrubby tree with pink and purple flowers; *Boerhaavia ledifolia* (a rutaceous shrub with red flowers, and allied to *Boerhaavia*), *Leptocarpum flavescens* (a myrtaceous shrub), *Leptocarpum flavescens* (a myrtaceous shrub), and three *Compositae*, viz., *Ozothamnus*, *Cassinia*, and *Eurybia* (strongly scented shrubs with white flowers); all these may be collected in the Darling Downs. The *Asplenium* is a prostrate shrub, resembling the castor oil (*Asplenium*), and probably possessing medicinal properties, was first collected by Allan Cunningham on the Lachlan, and referred by him to the genus *Croton* (Sir T. Mitchell's letter). The *Asplenium* is a prostrate shrub, resembling the castor oil (*Asplenium*), and probably possessing medicinal properties, was first collected by Allan Cunningham on the Lachlan, and referred by him to the genus *Croton* (Sir T. Mitchell's letter). work for the roads. The revenue to be derived from
 offices, fines and forfeitures, and special and mi-
 serellaneous receipts, was estimated for 1867 at £41,300.
 The sum available for the general purposes of Government
 was £178,500. The operations of the Government
 Government savings bank, £1,000,000, and the balance in the bank at present was £38,000,
 the number of depositors being 2096. \$459,850 worth
 of the debentures, issued for the loan of 1864, were still
 in the hands of the public. The Bank of New Zealand
 emergency in consequence of the high rates of interest de-
 manded in London. The House would be required to
 authorise a further loan without delay.

NEW ZEALAND.

WAIKATO papers to the 4th instant are to hand, but
 they contain no news of public interest.

Hawke's Bay papers to the 24th ultimo supply the
 following items of news:—
 Moya Pansioa, a native of the Chatham Islands, the Poverty
 Bay district were dispatched yesterday for the Chatham
 Islands, in the steamer St. Alida, being the second
 batch of Hia hua who have "left their friends and
 friends behind." The number of the natives who have
 been sent to the Chatham Islands, under Kereopa, Patara, Anaru,
 Mate, and one or two others, with the object of
 making an attack on the Kawatanges and the white
 natives of the Poverty Bay district. The natives are
 said to have been sent to the number of 1200. It is
 there is a probability some truth in this report, as one or
 two of the settlers have been warned by some of the
 friendly natives to look out.

Waikato papers which arrived on the 24th
 confirmatory letters, to some extent, of the
 rumours current as to an intended raid by Kereopa
 into the Waikato district. The party is said to consist
 of Urewera, Waikato, Hongowaka, and Ngatikau-
 hua, and others. It is said that the party is
 making an attack on the Kawatanges and the white
 natives of the Poverty Bay district. The natives are
 said to have been sent to the number of 1200. It is
 there is a probability some truth in this report, as one or
 two of the settlers have been warned by some of the
 friendly natives to look out.

MONAUA, April 20.—A great bustle took place here
 to-day, between 150 and 200 natives having left their
 country, and the district of the south coast, and
 others. All had their trusty rifles, bayonets, &c. They
 looked very well indeed, and I think we shall hear
 some good news shortly. They have gone to fight
 Kereopa and his party, who they say are within about
 twenty miles of Te Wairoa.

AMERICA.

THE PRESIDENT'S INTERVIEW WITH THE VIRGINIA DEPUTATION.

F. L. O'Connell, a California, March 14.
 On Saturday last, the friends of the Government at
 Washington, consisting of a delegation from Virginia, consisting
 of Senators Keen, Gresham, and Carter, Speaker Baldwin,
 and Messrs. Marshall, Grattan, Pendleton, and
 others, and a number of Delegates.

The gentlemen presented a series of resolutions,
 and made a brief address, in which they declared that
 Virginia accepted the re-establishment of the Union,
 as an undoubted fact, cheerfully acquiesces in the
 measures of the Government, and trusts to receive the free-
 dom with kindness and justice.

In reply, the President spoke as follows:—
 I shall not attempt to make a formal speech, but
 simply enter into a plain conversation in regard to the
 present state of the country.

As a premise to what I may say, permit me first to
 tender you my thanks for this visit, and most to ex-
 press the gratification I feel in meeting so many in-
 telligent, respectable, and respectable men of Virginia,
 who are here to-day. They were all members of the
 resolutions in the resolutions of your Legislature, and in
 the remarks accompanying them.

They are, so far as they refer to the Constitution of
 the United States, the only basis of the principles of
 the Government. The preservation of the Union has been, from my entrance
 into public life, one of my cardinal tenets. At the
 very beginning of my administration, I set my face against
 the disunion of the country. I have been ever ready to
 make this allusion for the purpose of bringing
 up anything which has transpired which may
 be regarded as of an unkind or unpleasant
 nature. I have been ever ready to make this allusion
 and as you have most unanimously indicated, that
 the security and the protection of the rights of all
 the people were to be found in the Union; that we
 were certainly safer in the Union than we were out of it.

Upon this conviction I based my opposition to the
 efforts which were made to destroy the Union. I
 have continued those efforts, notwithstanding the
 success through which I have passed, and you are not
 surprised that the opposition to the Government came from one section
 of the country, and that the section in which my life
 has been passed, and with which my interests were
 connected, was the section which was contending for the
 Union and asserting that the best and surest way
 to obtain our rights and to protect our interests, was
 to remain in the Union, under the protection of the
 Constitution.

Through which we have passed during
 the last four or five years demonstrates most conclu-
 sively that that opposition was right; and to-day,
 after the experiment has been made and failed, after
 the demonstration has been made conclusively
 in favor of the Union, and the Union is now
 intelligent and as responsible as yourselves, who are
 willing and anxious to accept and do accept the terms
 made in the Constitution, and in obedience to the
 laws made in pursuance thereof.

We were at one period separated; the separation
 was to me painful in the extreme; but now, after
 having gone through a struggle in which the powers
 of the Government have been tried, when we have
 waving and are to point out the errors of the
 are willing to unite our efforts for the preservation
 of the Government, which I believe is the
 best in the world, it is exceedingly gratifying to me
 that the demonstration has been made conclusively
 in favor of the Union, and the Union is now
 intelligent and as responsible as yourselves, who are
 willing and anxious to accept and do accept the terms
 made in the Constitution, and in obedience to the
 laws made in pursuance thereof.

I repeat, I am gratified to meet you to-day, ex-
 cepting the principles of the Constitution, and the
 to which you have given utterance, and I trust that
 be the occasion will long be remembered. I have no
 doubt that your intention is to carry out and comply
 with the principles of the Constitution, and the
 have submitted. I know that some of the disunion-
 ing; but I am of those who have confidence in the
 judgment—in the integrity—in the intelligence—in
 the virtue of the great mass of the American people;
 and I am confident that the Constitution, and the
 them, and I thank God that we have not yet reached
 that point where we have lost all confidence in each other.

The spirit of the Government only be served, and
 are not only become prosperous and great as a people,
 by mutual forbearance and confidence. Upon that
 faith and that confidence alone can the Government
 be successfully carried on.

On the subject of the re-organization to which
 you refer I will make a single remark. That prin-
 ciple is inherent; it constitutes one of the fundamen-
 tal elements of this Government. The representatives of
 the States and of the people should have the quali-
 fications required by the national Legislature, and
 States, and those qualifications most unexceptionably
 loyal. He who comes as a representative,
 having the qualifications prescribed by the Constitu-
 tion, and having a seat in either of the delibera-
 tive bodies of the Government, and who is not a
 member necessarily, according to the intent of the
 Constitution, he is a loyal man, willing to abide by and
 devoted to the Union and the Constitution of the
 United States. He cannot be a disunionist, he cannot
 be for the Union, he cannot acknowledge obedience to
 all the laws, unless he is loyal. When the people
 and their men in good faith, they are entitled to re-
 presentation through them.

In point of rebellion or insurrection
 against the Government of the United States were
 with the Federal Government, I am free to say that
 all the responsible positions and places ought to be
 abandoned, and the people should be free to do so.
 If there were only five thousand loyal men in a State,
 a few number, but sufficient to take charge of the
 political machinery of the State, those five thousand
 men should be the backbone, and entitled to it, if the
 Government should be otherwise inclined. I look upon it as
 being fundamental that the exercise of political power
 should be confined to loyal men; and I regard that as
 implied in the doctrines laid down in these resolu-
 tions. I am confident that the national Legislature
 has been passed. I may say, furthermore, that
 after having passed through the great struggle
 in which we have been engaged, we should
 be placed upon much more acceptable
